

Cloning Cards(2025) by @OpiumCarder

www.opiumcarders.com

Yes , I Know people saying you this shit is patched they have made a RFID and EMV Chips , Now I can't go ATM as before and swipe

Thing is YES , it is true that it is hard now than before to get the DUMPs , get the Card Info , Get the Strip written but

IT IS NOT DEAD

So I need even the beginners get hooked on this shit , hence I will go all basics.

Contents :

- 1) Getting Dumps
- 2) Magnetic Stripe MSR
- 3) EMV Chip Writing
- 4) RFID programming

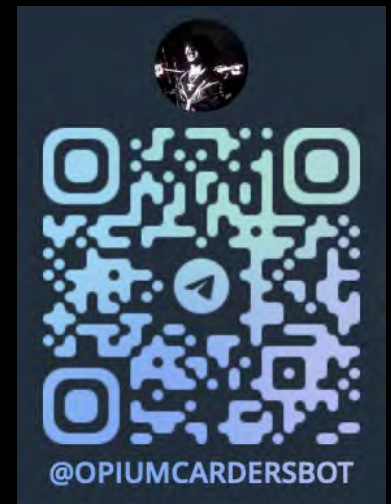

Beginners Note :

1. What is Cloning Cards ?

A : So Credit Cards are just a chip holding , magnetic strip cards which can be written with the info , and your machines at malls , shops are the ones which read out the info from this cards and process the payment

Before it was easy just to write the chip with a MSR605X (A Device used to write down the magnetic strip.

SCAN ME

Start the Telegram Bot , solve a captcha and get the Telegram channel verified invite links.

This is what the MSR605X Looks Like , it also has a version with Bluetooth (no wires you can use either)

Here it costs around 100\$ on the amazon , here is the link :

-----> [MSR605X Amazon Link](#)

You can also cop it via EBay , just get it from where it is cheap that's it , and for the bluetooth one which you can carry everywhere is is also handy

Beginners Note :

Q: So before we move let's understand what are dumps ?

A: When we talk about dumps, we mean the info from the magnetic strip on a credit card. This is the real juice—everything you need to clone a card or make money moves.

Now, how they get it? Couple of ways. They might hit a POS system (that's the machine stores use to swipe cards) with some sneaky malware that grabs all the card details. Or they might slap a skimmer on an ATM or gas station pump to secretly copy the card info when someone swipes it.

Once they got the dumps and PIN, it's game time. They either:

Sell that info to someone else for quick cash.

Take a blank card, encode the stolen data onto it, and turn it into a clone.

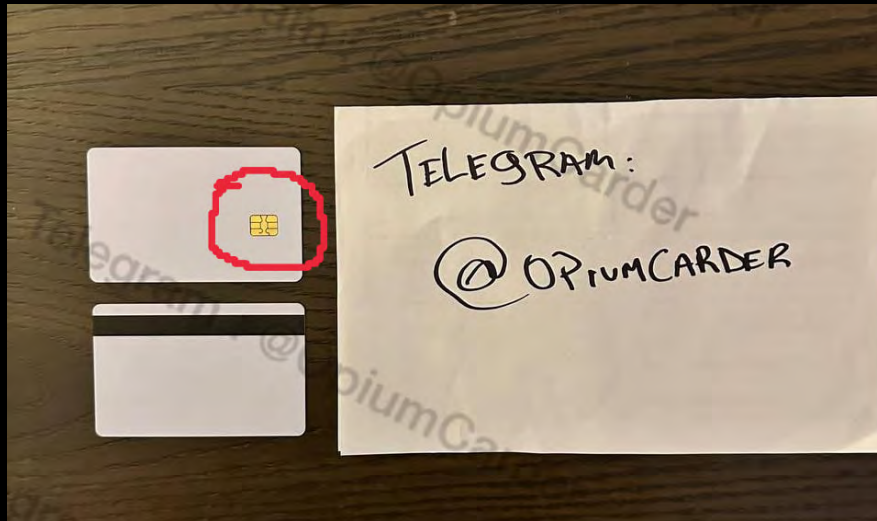

DUMP Format :

*B5491638473920182^Smith/Jackson^250830100005670000000?
5491638473920182=250830100005670000: ATM PIN: 1234*

Now this is what we when you buy dumps you get this info , but there is a major issue

This is all what you needed to write a card few years ago and emboss , and you were good

BUT NOW

The Issue is the EMV CHIP :

This Chip has almost all the info in a formatted manner

Account Holder Name , Card Number , Exp Date , CVV

As the new ATMs and POS use this as a 2FA after the Magnetic Strip Auth.

**Hence you need to write both with the same info,
Will teach you how do that with the software**

Now also another hassle is the NFC (Contactless Payment Setup) we will cover that too.

Now all have the basic understanding on what we will be doing here we go with the tutorial

NOW LET's START TUTORIAL

Tools Needed :

1. Blank Cards (Plastics) : These are the blank cards to which we will start writing our info on

Make sure you buy the following variants (Which have EMV , Mag Stripe , and NFC Support) - JCOP Based , JCOP21

-----> [Amazon Link for the Cards](#)

2. MSR605X Magnetic Strip Reader/Writer : This will be used to write the cards

-----> [MSR605X Amazon Link](#)

3. EMV USB ACR38_I1 CAC Contact Smart Chip Card Reader Writer : This will there to write your EMV Chip with the info as this

-----> <https://a.co/d/8SLqopl> (Amazon Link for the Contact Smart Chip)

4. (Optional) RFID Reader /Writer : This will make your card able to do the contactless payments

-----> [RFID Writer Amazon Link](#)

Now let's start the job

TUTORIAL

First let's buy the DUMP Info , along with the other info to write down to the mag Stripe and EMV

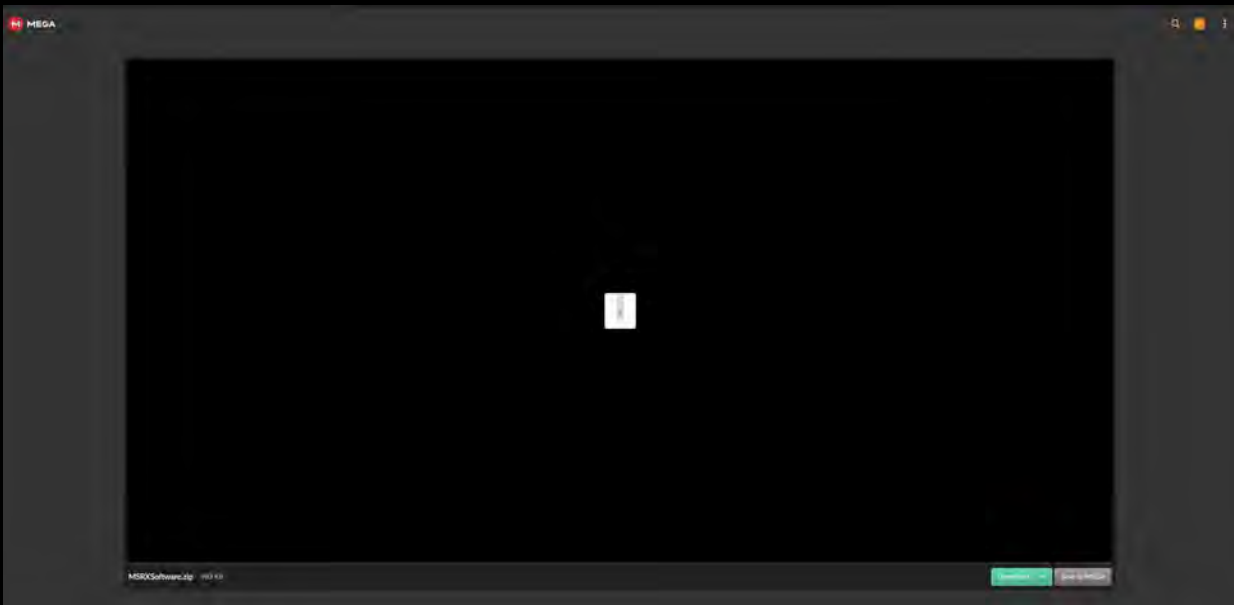

This shop is not sponsored

Shop : <https://realandrare.gg>

TOR Link : <https://realrarrean2ethv3pszrdllfvrjsqp246ftrxtwcjwdzff3h5c4viid.onion>

There are some other vendors will hook them Up further

Now I assume you have got the DUMPs purchased and now you are ready to write it on the card let's start

I have uploaded the software to write Magnetic Stripe here is the link :

[https://mega.nz/
file/8Hx0RZQC#brHOJBGSIX3FG3jATwYL8CEAKcUJOAneYaFE
ORh3MzE](https://mega.nz/file/8Hx0RZQC#brHOJBGSIX3FG3jATwYL8CEAKcUJOAneYaFEORh3MzE)

Alternate Downlaod Link -----> [LINK](#)

Now connect your MSR605X to your computer and install this software ,
now here is what you fill the Track1 and Track2 Info and write your cards

Now lemme show you how to write these cards
for e.g if you have the following DUMP bought

Track 1 : B4688403002282355^GERALD/ADSIT^06266250000625000

Track 2: 4688403002282355=0626625233200006250

- Writing the Magnetic Stripe Card , Here is the Video Tutorial on how to write the magnetic stripe

In Case the above video is not working here is the e LINK to the Video

-----> [LINK TO VIDEO](#)

Now you have your Magnetic Stripe Written Now we will move to the part

SO THIS IS WHAT CHANGED THE CLONING

People don't know how to write EMV Chips hence the declines , they don't know what Tools to Use and what software to write it from

This is what we will be using to write the EMV Chip

Now we will connect this and program our EMV chip (The golden chip of the card)

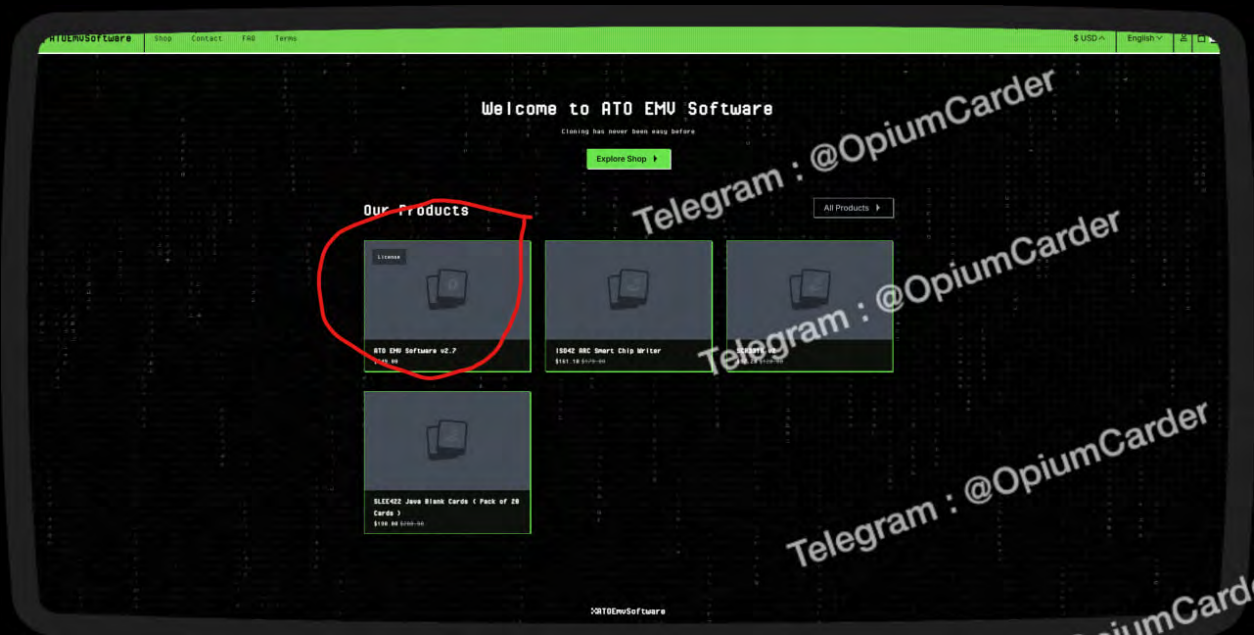

Now here where people don't know what software to use as half of the market is selling the fake

And don't believe the shit your download malware out of the shitty groups and pay thousands for it

Now the software for this is device limited hence you need to buy the key for this yourself.

The Site allows you to buy the software via Crypto.

Will show you how to to buy the key

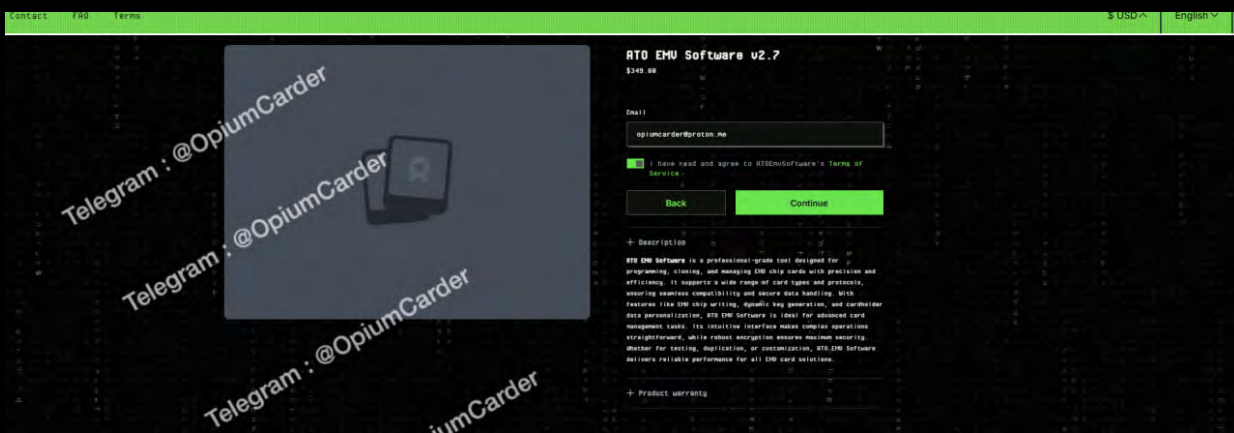

Site to bbuy the EMV Chip : <http://atoemvsoftware.store/>

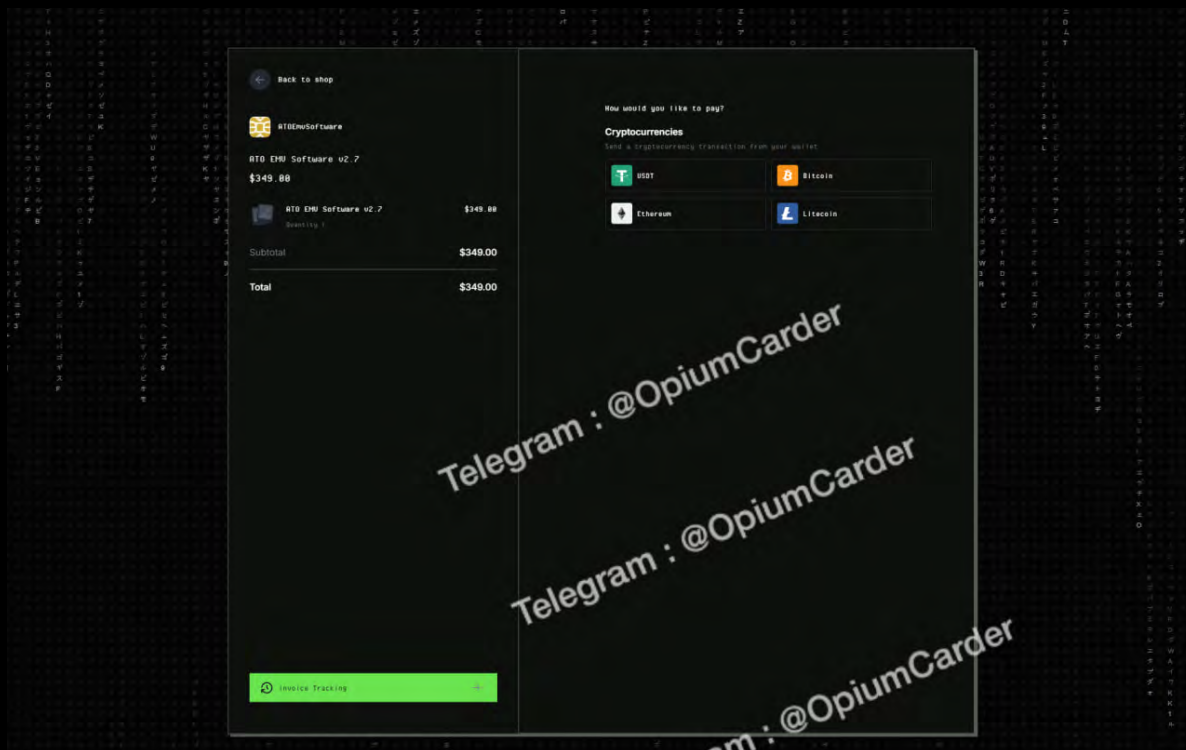

Now here there are other stuff too like cards , but I felt the blanks cards here are too pricey

Rather get them from Amazon, Or Ebay.

Anyway this site has the software we need (I would have pasted it to you guys but it is device limited)

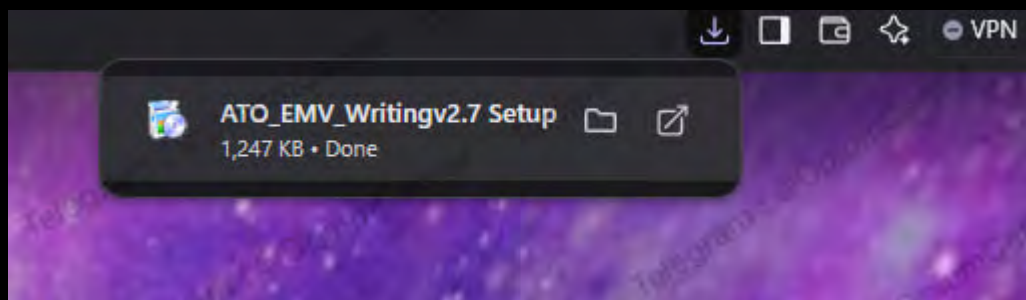

Hence you need to buy this yourself on your side

Now here you just choose your crypto currency and just checkout by paying the invoice , send the crypto to the shown address

Now after 1 confirmation , I got the link to the software open it and now connect your Chip Reader / Writer Device to your PC

Now just download the software , it will be sent to your Email

This is the main reason that the cloned cards still work

This is the only working EMV Software , I tried fuckin everything all were scams burned almost \$700 and finally found this legit one

Now it's time to write the chip connect your EMV Chip writer and you can open the software

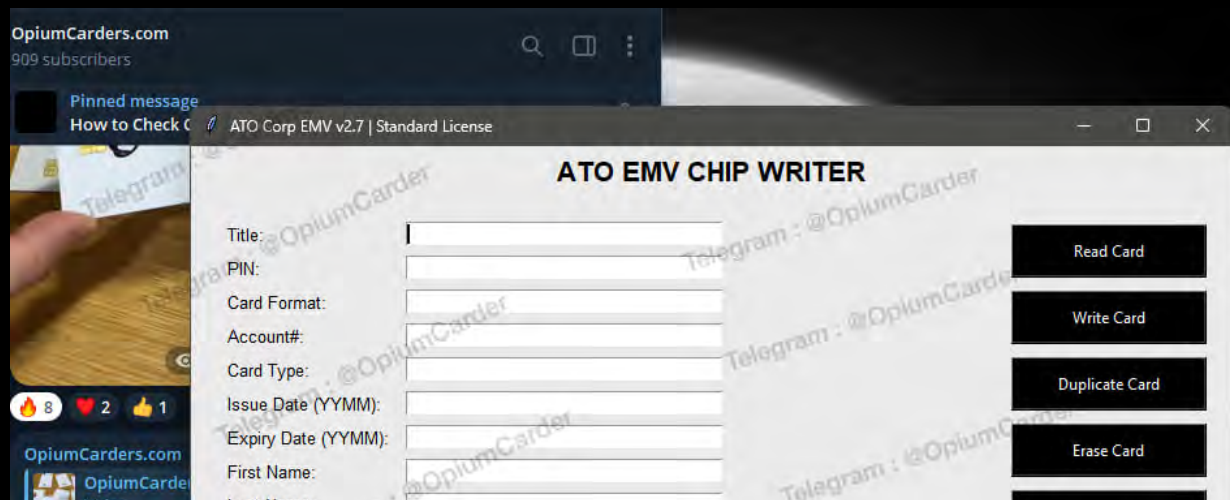

The setup is just

Click Next -> and choose where to install the software

Now if your Dump Only came with Track1 and Track 2 Info here is the site to extract the info

-----> <https://neapay.com/online-tools/>

!! Beaware these **E-Scan , X2 All In One** all these softwares are pure **SCAMS**. !!

Now this is like straight from here re enter the info you bought with the DUMP.
and just hit the Write Card Button here

**Now the major milestone of the EMV Chip , which people are unable to do hence
couldn't clone the cards is done**

Now check that the green light on the Chip Machine Stops then it means that the
card has done writing
Now you are almost ready

If you wanna make the card NFC / RFID programmable ,

In simple words " Tap to Pay " workable , these cards i mentioned can be
programmed for that

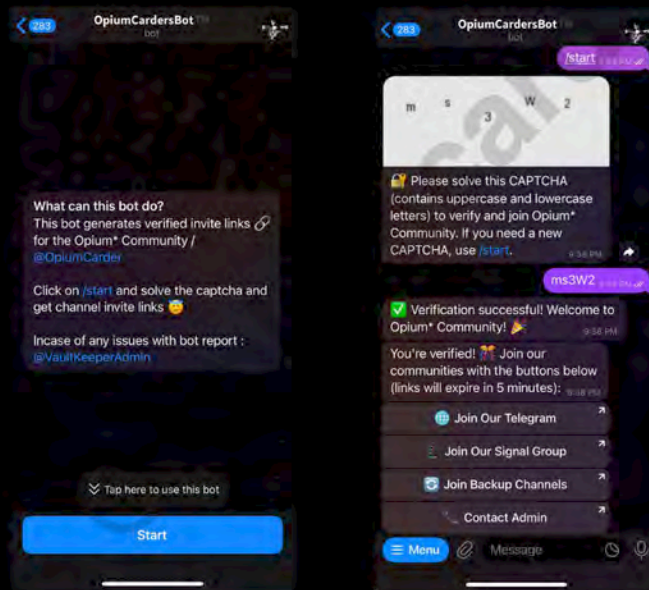

You just use the software your RFID Writer comes with , and just write down , it is
straightforward

That's the whole reason people stopped cloning cards , we solved the EMV Chip Issue now you can roll.
